

ReliefGrid

BEYOND TOMORROW SUMMIT

Decide who to help first.

When supplies, teams and time are scarce, ReliefGrid picks the first move and explains why.

ReliefGrid

REAL DATA, NOT DUMMY DATA

Every zone is a real place.

Population, severity and distance are pulled live from the Open-Meteo APIs. Nothing is fabricated.

RESPONSE ZONES ⓘ

+ Add location

Real places only. Search a location → live population, weather-based severity, and distance are fetched automatically. You set the field-reported signals.

ReliefGrid

HONEST PROVENANCE

Every field, labelled.

Live, derived from weather, or operator-reported.
Nothing measured is ever faked.

ReliefGrid

LIVE GEOCODING

Add any real location.

ReliefGrid geocodes it, pulls live weather, and computes the real distance instantly.

ReliefGrid

TRANSPARENT SCORING

Ranked on the server.

An inspectable rule recomputes the priority queue on every single change.

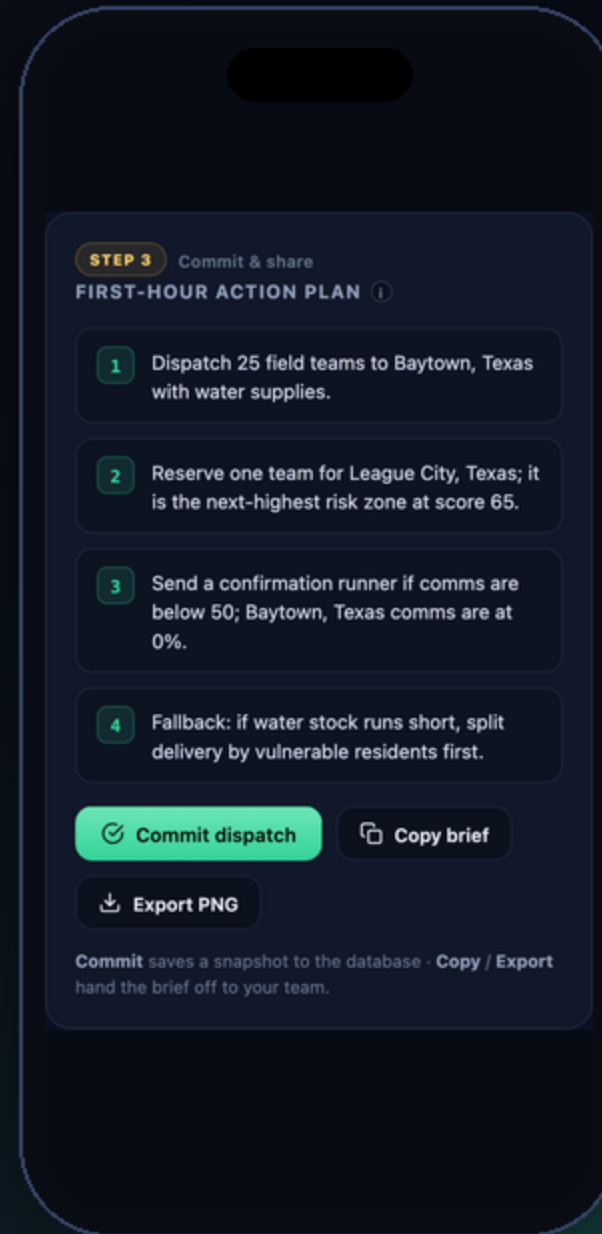

ReliefGrid

DISPATCH BRIEF

One clear first move.

Top zone, why it wins, and a first-hour plan, committed to a real database.

ReliefGrid

RELIEFGRID

Prioritize before the crisis spreads.

Real data, transparent scoring, FastAPI + SQLite full stack.

FIRST-HOUR ACTION PLAN

1. Dispatch 25 field teams to Baytown, Texas with water supplies.
2. Reserve one team for League City, Texas; it is the next-highest risk zone at score 27.
3. Send a confirmation runner if comms are below 50; Baytown, Texas comms are at 0%.
4. Fallback: if water stock runs short, split delivery by vulnerable residents first.
